

Transglobal Dome Homes

[Home](#) | [Our Product](#) | [About Us](#) | [Contact Us](#) | [Vendors](#) | [Dome Construction](#) | [Executive Summary](#)

The Transglobal Dome building is composed of a series of interlocking panels that can be configured into unlimited floor plans. Upon receipt of orders, the segmented panels of an individual structure can be shipped by container to almost any part of the world. The destination and use dictate what additional climatic elements are required, such as insulation, protective coating, air conditioning, heating, and so on. Transglobal can provide these features.

"Housing the World" is Transglobal's motto because of the versatility of our structures. We are satisfied that our quality of workmanship will achieve the individual national standards of our consumers and are prepared to submit and achieve the most stringent requirements.
